Business Intelligence & Data Engineering | Building Data Platforms

 LinkedIn |  alvaromoreno99@gmail.com |  Portfolio |  GitHub

St. Tres Peces, Madrid, Spain | Birth date 05/07/1999 ~ Spaniard

About me

I build **data platforms** that transform raw data into reliable products **for analytics and decision-making**. My career has evolved from Business Intelligence into Data Engineering, combining **business understanding with a software engineering mindset** to create scalable and maintainable solutions. My academic background in Biotechnology and Data Science gives me a **multidisciplinary perspective** for solving complex problems through data. Outside work, I enjoy developing personal projects in Data Engineering, ML, and AI while exploring **modern data architectures**.

Experience

BI Analyst – Fever ~ (10/2024 – Current) ~

- Design, development, maintenance, and optimization of **end-to-end ETL/ELT** data pipelines, integrating **key platforms** such as sales systems, marketing tools, payment processors, and financial gateways.
- Migration of traditional SQL transformations to a modern data stack using **dbt** and **Snowflake**, alongside **databases** administration and maintenance to ensure high performance and data consistency.
- Orchestration & **DevOps / CI-CD**. Creation of DAGs and complex data workflow orchestration using **Apache Airflow**, combined with **Docker** for containerization and **Jenkins** for deployment automation.
- Implementation of data process **automations**, **auditing**, and proactive **alerting/alarm** systems to guarantee real-time data quality, availability, and reliability.

Sales Analyst – Kenvue (J&J) ~ (10/2023 – 10/2024) ~

- Extraction and formatting of data from **SAP BW** and **PostgreSQL** databases using **SQL** and **PowerQuery**.
- Modeling, optimization and transformation of sales data in **Power BI** using **DAX**.
- Creation and enhancement of dashboards in **Power BI** for sales representatives, visitors, and distribution managers; integrating tables, matrix, graphs (+ **DENEb** visuals based on HTML), and indicators.
- Implementation, execution, and training of sales teams on business management tools like **Kantar XTEL**.
- Unification and integration of **B2B** transaction system, customers' planning, channels' sales, **CRM**, and improvement of the reconciliation between **demand and sales forecasts**.

Technical Skills

- **Data Engineering:** Python | SQL | Power BI | Excel | Airflow | DBT | Git | Jenkins | Docker | Snowflake | ML | ETL
- **Python Libraries:** Scikit-learn | TensorFlow | Numpy | SciPy | Pandas | Matplotlib | Seaborn | Scrappy | Biopython
- **Others:** MS Suite 365 | SuperPro Designer | ASPEN Plus | SPSS | Matlab | SciDavis | Jira | Trello | SAP BW
- **Languages:** English | French | Spanish – *All professional proficiency or above (Diplomas in LinkedIn)*

Education

- **Biotechnology Bachelor's Degree** ~ **University of Granada** (09/2018 – 06/2023)
Industrial mention ~ Industrial bioprocesses | Thesis: Industrial bio-production of gluconic acid 
- **Big data & Data science Master's Degree** ~ **University Complutense of Madrid** (02/2025 - 02/2026)
Thesis: Multi-source weather data integration through an ETL pipeline    

Projects

- **Ecommerce Sales analysis** (Consumer Health) using **Power BI** for extraction and formatting of useful data; and its modelling, transformation with **DAX**, calculations creation and visualization.  
- **Gantt Chart App:** implement an app-like Gantt Chart natively in **Excel** with features inspired by Jira.
